

Project Name: St. Peters and Paul
Location: Milwaukee, WI
WetSuit Applicator: Langer Roofing
Year Completed: 2007
Square Footage: 5,000

The old church roof was leaking so severely that the plaster was falling off the ceiling, causing sections of the church to become condemned. As the quote for a new slate roof was beyond their budget, using WetSuit enabled them to stop the leaks, open the condemned areas and buy some time to save up for a new slate roof.

The entire job was sprayed out of a basket. As WetSuit has a rapid cure time, any wind blown overspray becomes "dryfall" before it comes in contact with the surrounding area. The seams on the EPDM roof and numerous tears were also sealed with the Wetsuit membrane.
